Art Unit: 2653

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The Title should provide a more detailed structural identification of the feature or features which distinguish the invention from the prior art. The intended results produced by the structural differences can also be part of the content of the Title.

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP 608.01(o). Correction of the following is required: in the claims applicant refers to the phrase "length dimension differential" (e.g. Cl.1, line 7). However, the specification makes only two references to this phrase on pages 8[line 4] and 13[line 11] and does not explain in such degree as to allow the skilled artisan to understand what this feature is and/or its operation in connection with the disk drive.

3. Claims 6-18 are rejected under 35 U.S.C. §112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2653

The instant claims appear to be claiming structure which relies on a frame of reference which has not been clearly established: for example the terms or phrases "proximal" (e.g. Cl.6, line 17); "proximal and distal ends" (e.g. Cl.13, line 2); "distally spaced" (e.g. Cl.15, line 9), fail to be supported by or related to other claimed structure... what specific structure determines what is distal and what is proximal?

An exhaustive search of indefinite and/or ambiguous language has not been attempted, but only exemplified in the preceding paragraphs. Therefore the applicant is responsible for a thorough review of all the claims to make corrections as appropriate.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2653

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. Claims 1,2,4-16,19,20 are rejected under 35 U.S.C. §102(e) as being anticipated by Schar.

Note in regard to claims 1,2,4,5,9,20; to the extent claimed, printed flexible circuit shown in Fig. 8 reads on and performs to the same degree as claimed. The term "printed" is a process limitation and has not been defined otherwise by the specification.

Re claims 5,9,12,14,16; See Fig. 7. Note, to the extent claimed and understood, the structure as shown in Addendum A reads on and performs to the same degree as claimed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mallary and Boismier show other types of gram load control.

Art Unit: 2653

7. For a complete response applicant should identify how the claimed structure of his invention defines over **all** the art of record.

Moreover, where the applicant disagrees with the reasoning and/or application of the prior art on critical points of the claims, they should identify how the claimed structure of their invention defines over **all** the art of record not just the applied art.

Where applicant believes that the art is redundant and/or superfluous relative to the critical aspects of the claimed invention the applicant may simply state so in rebuttal summary.

8. Claims 3,17,18 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. J. HEINZ whose telephone number is (703) 308-1544. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, WILLIAM KORZUCH can be reached on (703) 305-6137. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
